

Breaking Down the Job Numbers

Do you need data on jobs available and skills required of Indiana workers? IndianaSkills.com is the go-to resource.

IndianaSkills.com – developed as a tool to help employers, workers and prospective employees – debuted in late 2012 with job supply and demand data for occupations that require more than a high school diploma but less than a four-year degree. Now, job postings for the bachelor-degree level and higher are also featured on the web site.

In addition, the data updates include postings and analysis for all jobs from January 2013 through June 2014. Other additions include a listing of experience required for each job posted and direct links to training providers.

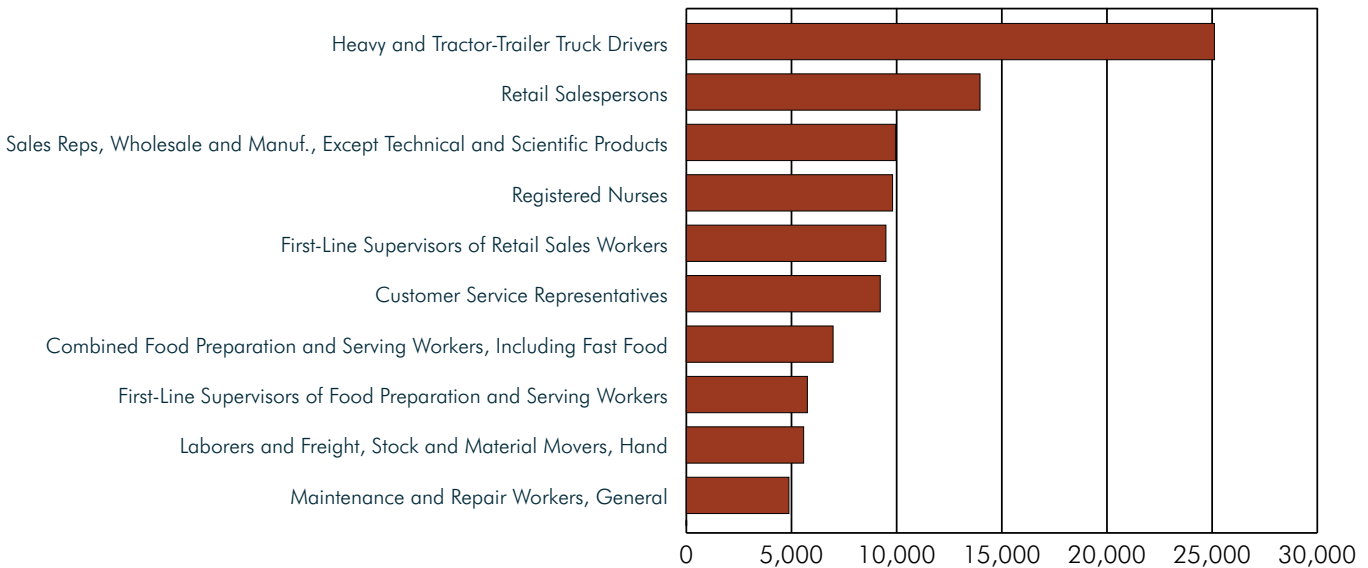

“There is a tremendous amount of education and workforce data available through various sources,” explains Amy Marsh, director of college and career readiness initiatives for the Indiana Chamber. “What IndianaSkills.com does is aggregate that information, add in the job postings data and make it easy for job seekers and employers to learn what is taking place in their industry or region of the state.”

Marsh adds that two entries to the site – middle skills (jobs requiring certificates, certifications and associate’s degrees) and all jobs – allow users to search for the data that best meets their needs. In addition to the most in-demand jobs, available information includes average salaries, required skills, training needed and job status/

earnings of recent graduates.

On the updated site, employers maintain the opportunity to easily download customized job descriptions. They can learn about regional and state occupational trends, wages being paid for similar positions, and the skills and credentials they should be requiring for their open positions. Career development professionals can take advantage of IndianaSkills.com to better guide students on available career options and the training required for those positions.

IndianaSkills.com is a product of the Indiana Chamber Foundation with support from the Joyce Foundation and Lilly Endowment Inc.

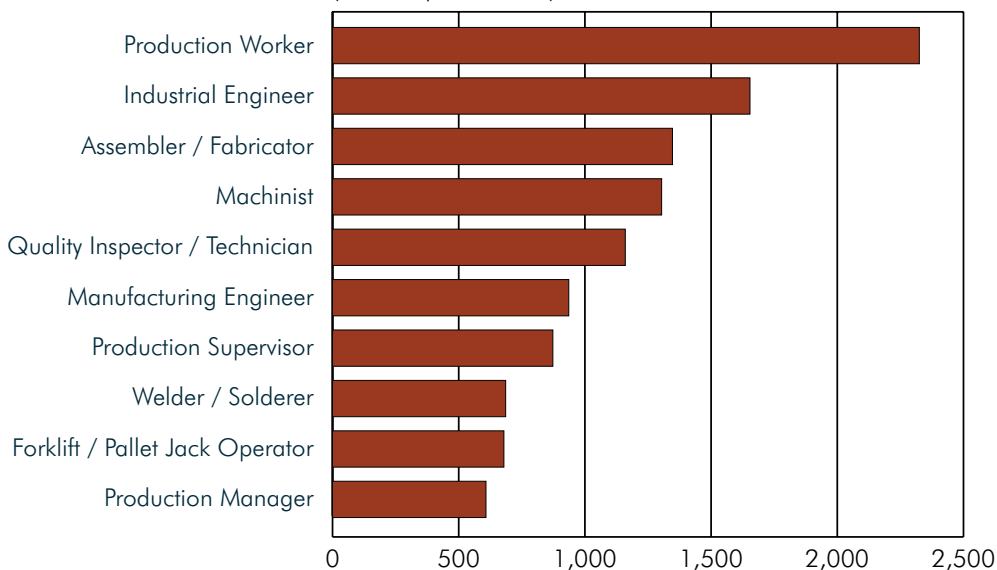

Job postings data for IndianaSkills.com is delivered by Burning Glass, a Boston-based organization founded in 1999 focused on developing technologies for matching people with jobs. The following charts on 2014 job postings for the state of Indiana are a result of additional data provided by the company.
